Digital Risk Group
(~2020)

2020
ISO/IEC5230

2021 Disclosed
HSR Simulator Code

2024
OSPO!

Use

Automotive Grade Linux (AGL)

2018 Automotive Linux Summit (Tokyo)

- Support establishment and growth of AGL community with LF
- Proceed adoption for our IVI products

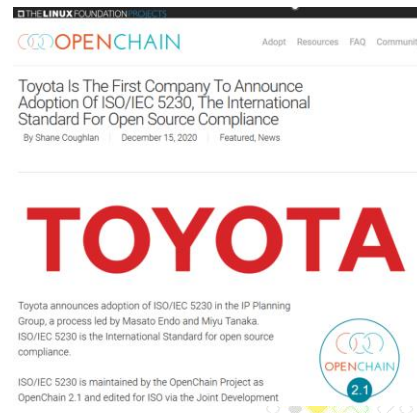

For adoption Open Source to products & services

2019 FSFE LLW (Barcelona)

- For Patent risk reduction, we're defining patent safety zone as a board member of Open Invention Network
- For appropriate copyright management, we became a platinum member of OpenChain Project and the 1st company to announce adoption of ISO/IEC 5230.

Contribute to Standardization of Open Source

2020 CES (Las Vegas)

■ For proper supply chain management, we established the first regional/industry WG OpenChain

■ With OpenChain JPWG, we proposed SPDX Lite

ISO/IEC DIS 18974

Information technology — OpenChain security assurance specification

Expand community for developing robots

<https://github.com/hsr-project>

<https://akarigroup.github.io/docs/source/intro.html>

■ Formed a community consisting of 57 research institutions from 10 countries to promote open research on partner for developing HSR (Human Support Robot). Open-sourcing the robot simulator to enable more people to participate in its software development.

■ Also open-sourcing and open-source hardwareizing the small tabletop AI robot "AKARI" to open the doors for everyone to participate in robot development.

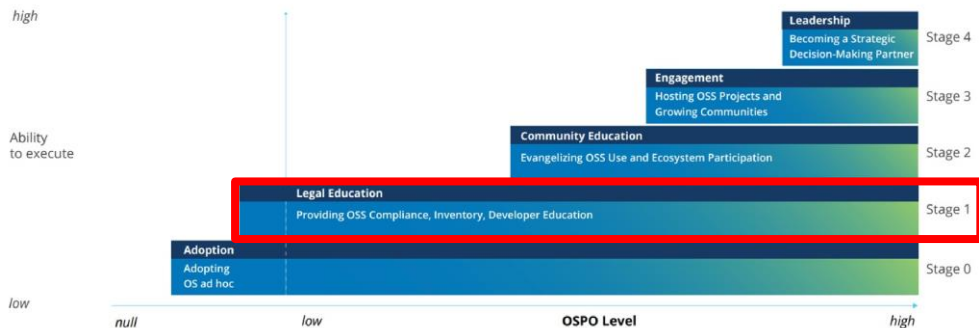

Why OSPO?

■ The growing importance of software in automotive development has led to increased use of OSS and progress in forming internal processes.

■ On the other hand, community contributions and strategic activities were promoted by a small number of internal members

2. OSPO's Destination

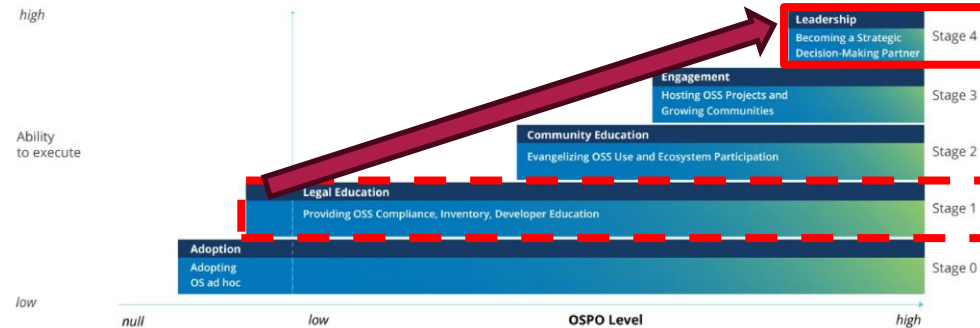

OSPO's Mission

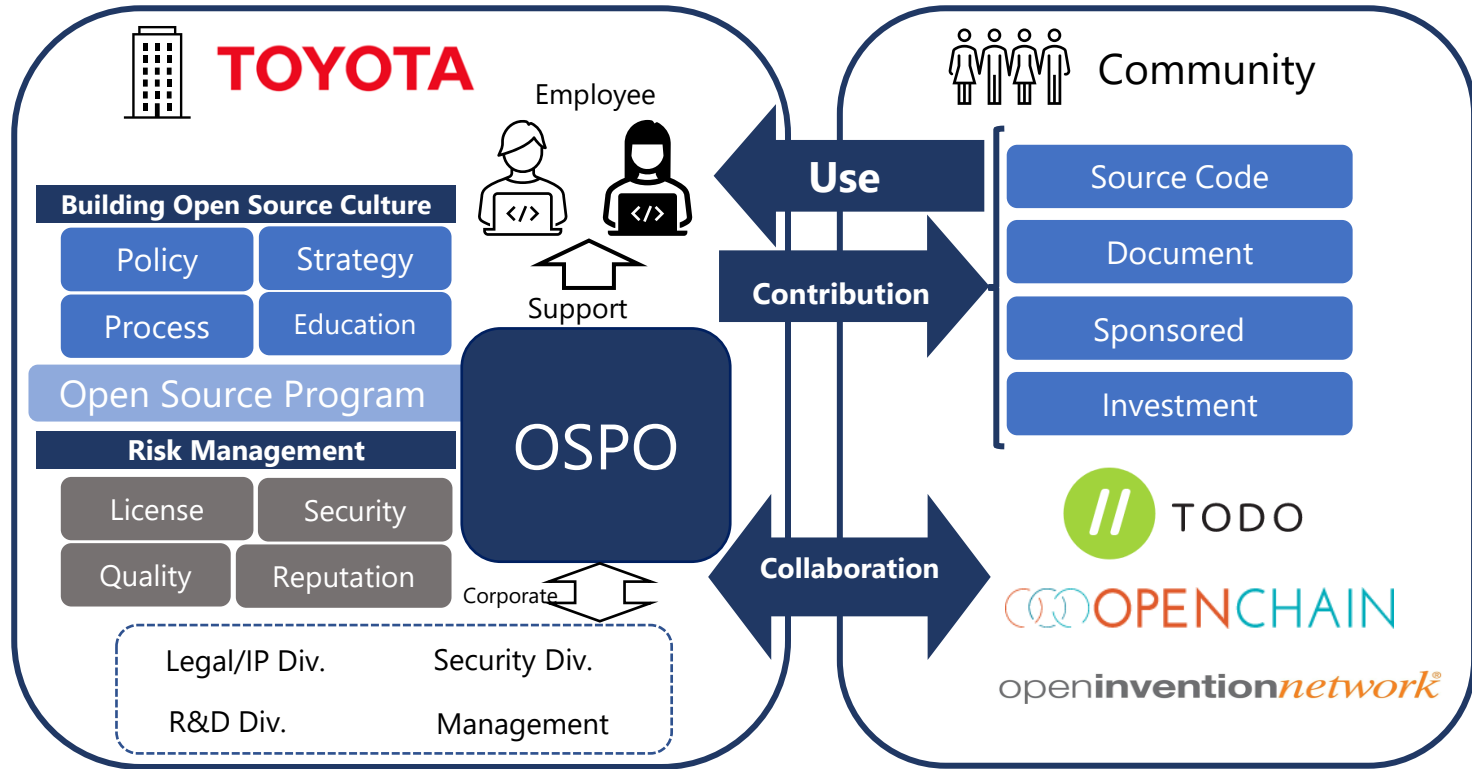

■ Make strategic use of OSS and community contributions common in the Toyota

■ Work with the community to achieve software innovation

OSPO's Function

OSPO's 3 Key Activities

Culture

Strategy

Tool

OSPO's 3 Key Activities

For creating culture of open source culture

Culture

- Information Sharing (Event/ Intra)
- Education/ Process
- Rewards/Awards

Open Source Education Comic

OSPO's 3 Key Activities

For strategic collaboration with communities

Strategy

■ Support Employee's Community Activities

■ OSPO's work with Community

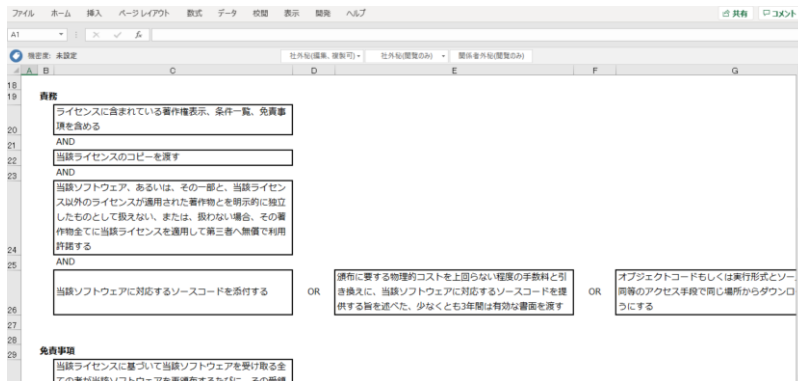

OSPO's 3 Key Activities

For enabling engineers to focus on technical value-add creation

Tool

■ Scan tools

■ SBOM management system

Announcing the Safety-Critical Rust Consortium

The Rust Foundation, AdaCore, Arm, Ferrous Systems, OxidOS, HighTec EDV-Systeme GmbH, TrustInSoft, Veeacle, and Woven by Toyota have formed a new group dedicated to the responsible use of Rust in safety-critical software.

by Rust Foundation Team

12 Jun 2024

DOVER, DELAWARE, USA, June 12, 2024 – The Rust Foundation, [AdaCore](#), [Arm](#), [Ferrous Systems](#), [HighTec EDV-Systeme GmbH](#), [Lynx Software Technologies](#), [OxidOS](#), [TECHFUND](#), [TrustInSoft](#), [Veeacle](#), and [Woven by Toyota](#) are thrilled to jointly announce the Safety-Critical Rust Consortium. The primary objective of this group will be to support the responsible use of the Rust programming language in safety-critical software — systems whose failure can impact human life or cause severe environmental or property harm.
